

ABSTRACT OF THE INVENTION

An apparatus for performing operations on a surface of an electronic substrate comprises a frame, a dispenser, coupled to the frame, to dispense a material onto the
5 electronic substrate, a stencil moveable on a gantry system having at least one aperture to receive the material as the material is dispensed on the substrate, a controller that controls dispensing of the material on the substrate, and a wiper to remove material from the stencil as the stencil is translated away from the electronic substrate by the gantry system.
